## LANDS END HOMEOWNERS' ASSOCIATION OF HILTON HEAD

*Approved by LEHOA Board effective May 20, 2024*

### **Electric Vehicle (EV) Charging**

As a general matter, Electric Vehicles ("EV") may be charged using either a standard 120-volt outlet ("Level 1 charging") or a 220-volt rapid charger ("Level 2 charging").

Both types of EV charging are safe when done using appropriate equipment and in accordance with certain common sense safety measures. If conducted improperly, EV charging poses substantial fire and electric shock risks. In order to minimize these risks, the HOA imposes the following requirements on the charging of EVs in the Lands End community (which must be followed by homeowners, their guests, and renters).

Level 1 Charging: Level 1 chargers (including EV trickle battery chargers) must be plugged **directly** into an outlet located in the utility shed. Chargers may not be plugged into interior outlets of homes or exterior porch outlets. The use of extension cords is strictly prohibited irrespective of the location of the outlet.

#### Level 2 Charging

- The installation of Level 2 chargers requires the submission of a Repair/Renovation Application to the Board and may only be installed in or behind the utility shed (i.e., not visible from the street).
- Level 2 chargers may only be installed by a licensed electrician who is responsible for ensuring that all Town of Hilton Head and CSA requirements are satisfied and that the installed equipment is UL certified, and the installation meets the NEC requirements.
