

This is the pull box for Hargray fiber, at the North driveway to 211. that comes up the east side of Cordillo Parkway

This telephone cable box is just past the cable pull box at the same North 211 driveway. This box has been here for years, designates buried cable. I am guessing it is the old co-ax cable for the telephone and or the old Adelphia cable.

Path of fiber cable at end of the J Building coming in the North driveway at 211.

Continued path of fiber behind the J Building.

Continued path of Fiber to the endpoint pull box at the end of J Building (J2).

Pull Box for Fiber at end of J Building (J2), and Hargray Fiber entrance for J2.

Spectrum (formerly Time Warner) co-ax cable box for J building.

J1 uses Spectrum (Time Warner when it was installed) and J2 uses Hargray. The fence was not installed yet, when this connection was installed, so do not think the cabled is buried very deep, or runs very far out in the yard.

Spectrum coax cable runs to end of J building and into the common crawl space via the air flow opening, then is pulled to J1.

Spectrum co-ax
cable for J1
